Version: **v6**

Validity: **permanent**

Object: LoA of the Bordeaux FIR (LFBB)

1. Purpose

The purpose of this Letter of Agreement (LoA) is to define the ATC units and the coordination procedures to be applied within the **Bordeaux FIR** when providing Air Traffic Services (ATS) operating under IFR or VFR flight rule.

The content of the agreement is approved by the concerned FIR Chiefs, the FR-TD and the FR-HQ and its application is mandatory for all IVAO member providing ATS within and active ATC position concerned by this LoA.

2. General procedures

Traffic in sequence entering or leaving a TMA airspace shall be handed over by the ACC controller with **minimum spacing of 5 NM**. An **operational separation of 8-10 NM** is advised to ensure a proper regulation. This separation must be **constant** (aircrafts restrained to the same speed) **or increasing** (succeeding aircraft is not faster). Coordination of speed control should be granted via entries in radar labels and does neither need approval nor acknowledgement by receiving sector.

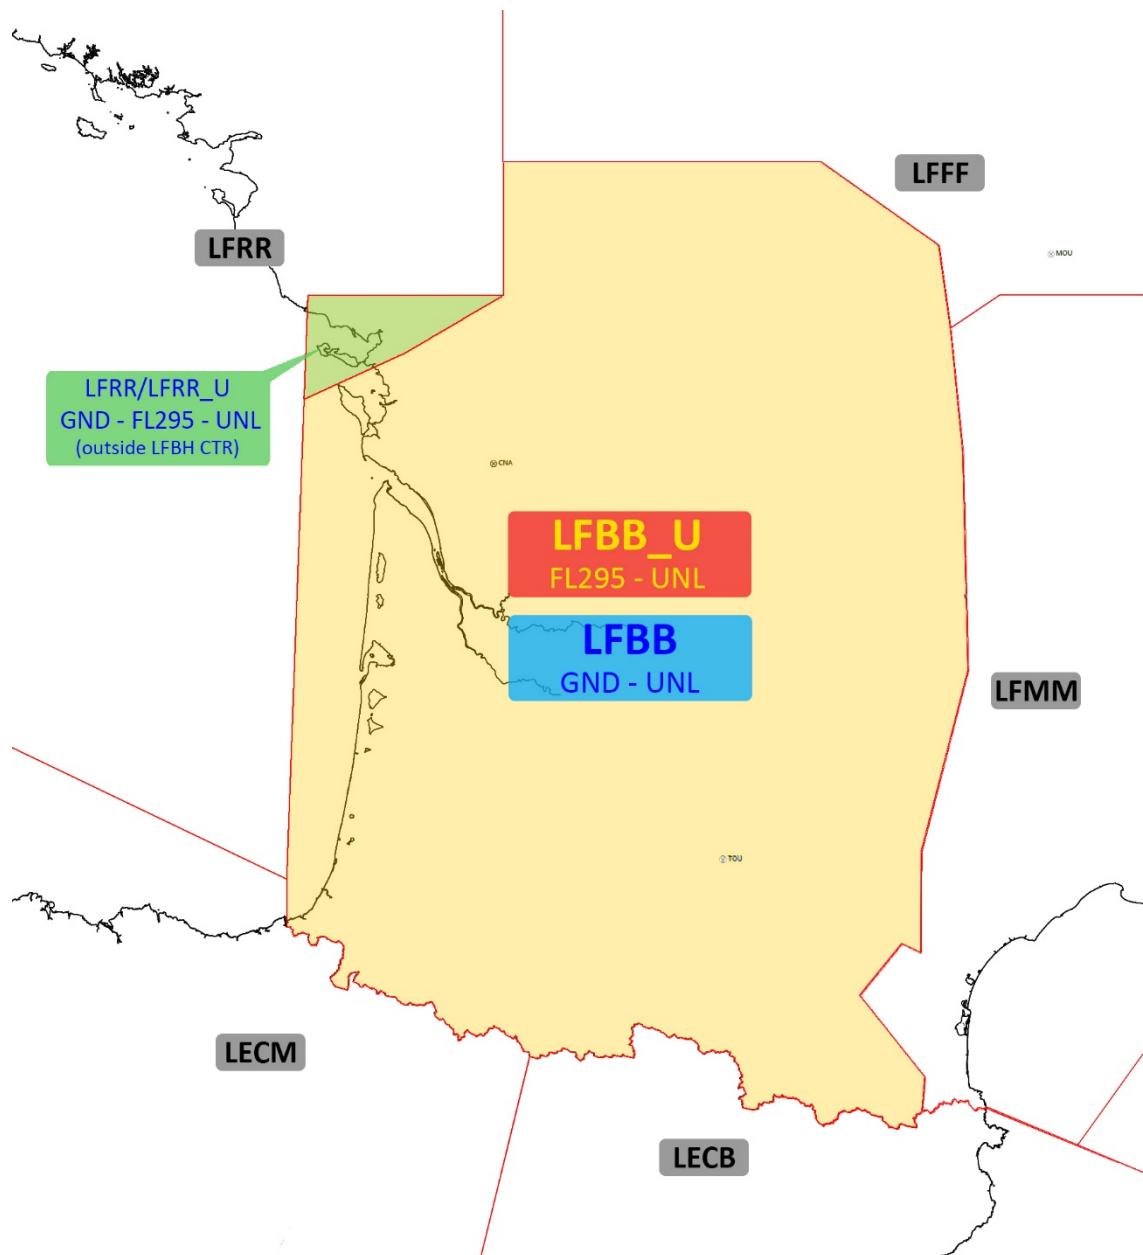

Traffic shall be handed over **as soon as practical** and, whenever possible, **at latest 3000 ft before reaching the cleared flight level**.

Traffic in sequence shall be handed over properly **separated and clear of any conflict**. **Unless** the receiving ATC unit **issue a clearance** modifying the route, altitude or speed, the **transferring sector remains responsible for separation**.

3. ATC units description

3.1 The Area Control Center (ACC)

The ATC unit in charge of FIR and UIR airspaces under the responsibility of Bordeaux ACC is **Bordeaux Control** and consists in only one primary sector (LFBB_CTR). This ATC unit may be split into two subsectors (LFBB_CTR and LFBB_U_CTR) under the condition specified in [ATC Rule 4.3](#). The lateral and vertical boundaries of the airspace under the responsibility of the CTR are indicated in the figure and table below.

The radio communication frequencies associated to the ACC positions are indicated below.

ATC Position	Callsign	Frequency	Remarks
Primary Sector			
Bordeaux Control	LFBB_CTR	125.105	SFC-UNL
Secondary Sectors			
Bordeaux Control (Upper)	LFBB_U_CTR	127.675	FL295-UNL

In the absence of the corresponding ATC units, ATS within the following airspaces are delegated to the ATC operating at the CTR position.

ATC Position	Callsign	Delegated positions
Primary Sector		
Bordeaux Control	LFBB_CTR	Cazaux Approach (LFBC_APP and underlying positions) Aquitaine Approach (LFBD_APP and underlying positions) Cognac Approach (LFBG_APP and underlying positions) La Rochelle Approach (LFBH_APP and underlying positions) Poitiers Approach (LFBH_APP and underlying positions) Limoges Approach (LFBH_APP and underlying positions) Marsan Approach (LFBM_APP and underlying positions) Toulouse Approach (LFBO_APP and underlying positions) Pyrénées Approach (LFBP_APP and underlying positions) Dax Approach (LFBY_APP and underlying positions) Biarritz Approach (LFBZ_APP and underlying positions) Avord Approach (LFOA_APP and underlying positions)
Secondary Sectors		
Bordeaux Control (Upper)	LFBB_U_CTR	None

It is recalled that ACC provides FIS (Flight Information Service) within all delegated airspaces (including all aerodromes disposing of an AFIS position) within the limits of his skills and of the traffic load. If applicable, the ATC shall indicate on his ATIS whether FIS are provided.

Likewise, the delegation of Approach positions implies providing Tower and Ground services. However, the ACC may limit the delivery of his services to essential clearances (startup, taxi, takeoff and landing) and release traffic on UNICOM when clear of possible conflicts.

4. Coordination procedures

Coordination procedures between Bordeaux ACC and underlying Approach positions are defined as follows. They represent a general framework that does not replace the coordination between ATC. Any coordination procedure not mentioned in this LoA must be established on a case-by-case basis. Likewise, coordination between Approach and Tower (initial climb whenever it is not published, go around procedure, multidirectional departures OMNI, VFR entry/exit, etc.) is left to ATC initiative.
